Like a camera. Only smarter.

Huddly IQ is the first of its kind – an AI-powered collaboration device that delivers a video meeting experience like no other, with:

- 150° wide-angle video
- Embedded mic array
- AI features
- Analytics API

A close-up, low-angle shot of a dark, textured device, likely a camera or microphone. The device has a prominent lens in the lower-left quadrant and a microphone array in the upper-right. The lighting is dramatic, highlighting the texture and the circular elements of the device.

Everyone seen. Everyone heard. Anywhere.

IQ's 150° wide-angle lens and studio-quality embedded microphone array deliver an immersive video meeting experience, giving everyone a voice and a seat at the table.

USB-powered and compatible with any platform, IQ is perfect for small huddle rooms, medium size meeting rooms and open collaboration spaces.

Smarter video, better meetings.

A neural engine allows IQ to see, understand and respond to its environment in real time. With the Genius Framing feature, it can detect the people in its field of view and respond by automatically framing them.

IQ is designed to get even smarter over time with enhancements and new Genius feature releases.

What you see

What IQ sees

5

Advanced data. Better decisions.

IQ gives organizations crucial insights into how their meeting spaces are being used, with high-quality analytics data accessible via the Huddly InSights API.

With Huddly's unique single-lens, multi-stream functionality, IQ detects and counts the people in the room in real time. This analytics data can then be securely shared with management dashboards.
